Ideation Phase: Empathize & Discover

Date	28 October 2026
Team ID	N/A (Individual Project - Shriyanshu Jain)
Project Name	Global Electric Vehicle (EV) Market Performance & Insights
Maximum Marks	4 Marks

Empathy Map Canvas

1. WHO are we empathizing with?

• User: Automotive Strategy Director (Emily), Business Intelligence Manager (David), and Sustainability Research Analyst (Sarah).
• Situation: They need to make data-driven decisions regarding EV market investments, product portfolio expansion, geographic supply chains, and future battery chemistry adoption (NMC, LFP, Solid-State).

2. WHAT do they need to DO?

• Track global EV sales volume, pricing strategies, and range efficiency across different vehicle categories.
• Identify manufacturing distribution hubs and global manufacturer market shares.
• Correlate advanced battery types and capacities (kWh) with vehicle performance and customer satisfaction ratings.

3. WHAT do they SEE?

• Fragmented, static market reports and data scattered across disconnected spreadsheets.
• Competitors rapidly launching new EV models equipped with next-gen battery tech (Solid-State, Sodium-Ion).
• Complex global supply chain data that lacks visual geographical mapping.

4. WHAT do they SAY?

• "We need a clear, interactive 9-visual Tableau view of the global EV market."
• "How does battery capacity and chemistry actually impact our customer satisfaction and driving range?"
• "I can't confidently make strategic R&D and platform decisions based on static, isolated data."

5. WHAT do they DO?

• Spend hours manually cross-referencing multiple regional sales reports and technical data sheets.
• Struggle to visually present price-to-range dynamics and adoption trends for stakeholder meetings.
• Seek a 4-point consolidated Tableau Story presentation to streamline their executive briefings.

6. WHAT do they HEAR?

• Stakeholders and the board demanding higher ROI, portfolio optimization, and clear strategic direction.
• Consumers expressing "range anxiety" while simultaneously demanding better battery performance and affordable pricing tiers.
• Industry news and warnings about supply chain risks and the rapid shift in emerging battery technologies.

7. WHAT do they THINK and FEEL?

• Pains (Frustrations & Obstacles): Frustrated by scattered data, fear of investing massive capital into the wrong vehicle platform, and feeling exposed to supply chain blind spots due to a lack of geographic visibility.
• Gains (Wants & Needs): Needs a unified, interactive Tableau dashboard for instant insights, wants clear visual proof (like scatter plots) of price vs. range, and hopes to feel confident and prepared when presenting strategic recommendations to the board.
