Project Initialization and Planning Phase: Project Proposal

Date	28 October 2026
Team ID	N/A (Individual Project - Shriyanshu Jain)
Project Name	Global Electric Vehicle (EV) Market Performance & Insights
Maximum Marks	4 Marks

Project Proposal Details:

Category	**Details**
Project Objective / Problem Statement	Global EV market data (sales, pricing, battery tech, and geographic production) is heavily fragmented across static spreadsheets. Stakeholders struggle to correlate technical specifications (like battery capacity) with market performance, hindering strategic R&D and supply chain decisions.
Proposed Solution	To develop a centralized, interactive Business Intelligence (BI) solution using Tableau. The project will process over 100,000 EV records to build a 9-visual interactive dashboard and a guided 4-point storyboard tailored to distinct business personas.
Key Features	• Interactive filtering (Region, Vehicle Segment, Battery Type). • 9 core visuals including Filled Geographic Maps, Scatter Plots (Capacity vs. Range), Heatmaps (Customer Ratings), and Stacked Bar Charts. • A 4-point executive Tableau Storyboard (Market Summary, Strategy, Competitive Landscape, Tech Trends).
Target Audience / Stakeholders	1. Market Strategy Director (Emily) - Focuses on portfolio expansion and sales. 2. Business Intelligence Manager (David) - Focuses on geographic manufacturing hubs and market share. 3. Sustainable Mobility Research Analyst (Sarah) - Focuses on battery chemistries (LFP, NMC, Solid-State) and efficiency.
Technology Stack	• Data Source: CSV files • Data Pre-Processing: Python (Pandas)

	• Visualization & Analytics: Tableau Desktop / Tableau Public • Presentation: Microsoft PowerPoint (for executive briefing)
